

**CLEAN,
SAFE,
EFFICIENT
POWER**

Essential Services Ltd.

**RESIDENTIAL, COMMERCIAL AND INDUSTRIAL
ENERGY MANAGEMENT SERVICES**

Powerful Features:

*Protects the refrigerator
from Power Line Voltage
damage*

*Soft-starts motors and
extends useful life of
refrigerator*

Maintenance-free

Powerful Benefits:

*Saves Money - Save \$5 or
more (previously wasted)
Energy Dollars per month*

*Extends equipment life
and performance*

*Lowers equipment
replacement and
maintenance costs*

*Protects our natural
environment; by reducing
the electrical generation
demand and therefore
reducing fuel usage, plant
emissions and hazardous
waste*

**INTRODUCING A NEW PRODUCT LINE:
the**

**EET POWER MANAGER
For Single-Phase Refrigeration**

EET POWER MANAGER... A 24 hour/day
“Protective” Supervisor that increases Refrigerator
life-time, lowers repair expenses, extends machinery
life and saves energy by reducing electric current to the precise amount
needed by the actual “work” being done.

**Electronic Supervision increases
Refrigerator Efficiency & Saves Energy!**

GENTLE ACCELERATION... prevents “hard-starts” and high current
peaks that: (1) electro-mechanically stress the motors and compressor
parts, (2) jerk and break mountings and (3) cause electric noise that bothers
computers and other machines.

FAULT DETECTION... prevents high current that causes motor-heat
damage with power line (over or under voltage) problems, broken elements
or jammed mechanisms.

ELECTRONIC PROTECTION... prevents motor heat damage by turning
off motor current when protective diagnostics detect an electrical or me-
chanical fault event.

“EET” ENERGY SAVING... prevents wasting electric current as life
shortening watts (heat) in the motor and
power lines; with EET, electric power = work
power.

**“POWER
MANAGEMENT”**

THAT PAYS FOR ITSELF !
